VOLTARAX

TEST FIXTURE - SYNTHETIC DATA ONLY

Site: test-site Primary sensor: test-device

From 1 Oct 2026, 12:00 am IST
Until 2 Oct 2026, 12:00 am IST (end not included)
Prepared 1 Nov 2026, 5:30 am IST

Recorded energy	**24.000 kWh**	Estimated
Estimated carbon avoided	**19.680 kg CO2**	Estimated
Recorded-power time coverage	**100.00%**	Estimated
Alerts created in period	**2**	Estimated
Work orders created / closed	**1 / 1**	Estimated
Physical / operational uptime	**Unavailable**	Unavailable

Read these figures with their limits

Left-held power integrated between recorded valid samples, capped at 900 seconds per interval. Missing intervals are not extrapolated. This is an operational estimate, not independent assurance or a certified carbon credit.

A resolved alert or closed work order is an operator record. It does not independently verify a physical repair.

Method, source and quality

Energy method - Calculated

Only the configured primary device is integrated. Valid power intervals are held from the preceding reading and capped at fifteen minutes. Actual recorded zero power contributes zero. Coverage is 100.00%; minimum policy 90%. No missing-period production is inferred.

Carbon conversion - Estimated

Recorded kWh multiplied by 0.82 kg CO2/kWh. The operator explicitly marked this factor/source verified; this software has not independently certified its applicability. Factor source: https://factor.example.test/synthetic-unit-test-reference

Operations records - Calculated

Counts use site-scoped PostgreSQL records. Alert and work-order creation counts use their creation time within this period; closures use their actual recorded closure time, including work orders created earlier. All period boundaries are in IST.

Uptime - Unavailable

Sensor power coverage cannot establish relay contact state, inverter availability, physical repair quality or operational uptime. No uptime percentage is invented.

Data-quality legend

Measured: a reported observation, without a calibration guarantee. Calculated: arithmetic or stored-record aggregation. Estimated: a model, factor or synthetic layout-test value. Unavailable: evidence is missing. No number in this report certifies a saving, compliance result or carbon credit.

Synthetic layout fixture

This document is generated only by automated tests. Its values are invented test inputs and must not be used as a site or ESG statement.
